Subsystem Acronym	Full Name	Core Responsibility	Primary Question Answered	Current Development Status	Source
CA	Consciousness Algorithm	Manages high-level cognitive orchestration and resource allocation while deciding which candidate processes or anomalies deserve sustained attention or retention.	What deserves cognition, attention, retention, resources?	PROPOSED	1
TUCR	True Universal Consciousness Runtime	Manages the substrate-independent execution context and the transformation between different physical realizations of the logical cognitive system.	How does logical cognition inhabit an execution substrate?	PROPOSED	1
HTCE	Hyperdimensional Thought Cloud Engine	Governs the active cognitive field, including candidate generation, activation decay, resonance coalitions, and cognitive addressability.	What cognitive state-spaces currently exist and participate?	PROPOSED	1

HVD	Hyperdimensional Vector Database	Defines logical database semantics, including identity, records, retrieval, and durability contracts, independent of physical weight.	What are the database semantics of those state-spaces?	IMPLEMENTED	1
TMS	Transdimensional Memory Substrate	Manages the active memory and physical realization of state, including working memory trajectory, copy-on-write sharing, and compaction.	How is active state physically realized and remembered now?	IMPLEMENTED	1
HDF5	HDF5 (Persistence Layer)	Provides durable, long-term persistence and generation storage for the logical database architecture outside of the active realization.	What durable state survives long-term?	IMPLEMENTED	1

HIGC	Constitutional Admissibility (High-level Internal Geometry Control)	Enforces protected admissibility boundaries to determine if a state or transition is constitutionally allowed within the system geometry.	Is this state/transition constitutionally admissible?	ACTIVE DEVELOPMENT	1
THDE	Path-Dependent Evolution (Trajectory Homeostasis & Development Engine)	Governs how the system state may evolve based on its historical trajectory, context, and provenance.	Given history, how may state evolve?	ACTIVE DEVELOPMENT	1
Maera	Maera (Expression Boundary)	Renders internal cognitive state into outward expression, language, or action projections without defining internal truth.	How is internal state rendered outwardly?	ACTIVE DEVELOPMENT	1
QMT	qbin Morphism Theory	Evaluates transformations to ensure that the resulting entity remains continuous with the source through invariant and provenance checks.	Did continuity survive this transformation?	EXPERIMENTAL	1

Cyrae	Cyrae (Regulatory/Epistemic Observer)	Acts as a bounded observer to evaluate uncertainty, novelty, and homeostatic conditions without possessing authoritative history.	What bounded epistemic/homeostatic condition is observed?	PROPOSED	1
